Increasing numbers of young children with diagnosed disabilities and unique learning needs are enrolled in early childhood programs. Individualizing learning opportunities is one widely accepted practice for successful inclusion.

**Individualizing Instruction in Preschool Classrooms**

Mary B. Boat, Laurie A. Dinnebeil, and Youlmi Bae

In 2003, 34% of young children with disabilities received special education services in community-based early childhood programs such as child care centers, Head Start classrooms, and nursery schools (U.S. Department of Education, 2005). These services are provided by early childhood special educators.

However, these special education professionals usually spend just a few hours each week with the children. If early childhood inclusion is to be a successful educational approach, it is imperative that ALL early childhood teachers understand and are able to provide individualized instruction to young children with special needs. This article describes teaching techniques that preschool teachers can use to support the learning needs of all children with whom they work, including young children with disabilities and special needs.

The term **instruction** refers to the methods used to teach a curriculum (Bredekamp & Rosegrant, 1992). In early childhood education, instruction encompasses many different types of learning experiences ranging from non-directive to directive (Wolery, 2005; Wolery & Wilbers, 1994).

Just as children's learning falls along a continuum from passive to active, so does the process of instruction. Instruction may be as basic as modeling how to put on a coat, or it can be as complex as helping children learn to read. The degree to which teacher direction or guidance is used depends on the objective of the experience and the children's individual needs. Thus, for teaching to be instruction, it must be intentional. The result of appropriately individualized instruction is meaningful learning for all young children.

**What is instruction?**

**Instruction** refers to intentional teaching methods. When is something teachers do or say considered to be instruction? When a teacher draws a young child in to a conversation about a picture or experience, is that teacher providing instruction? Perhaps it is, if the teacher is creating an opportunity for the child to express herself verbally or practice turn-taking skills. Teaching is instructive if it is done intentionally to provide support or opportunities for children's learning.

Teachers who are aware of children's learning needs continuously look for ways to support their learning.

**How to Individualize Instruction**

The process of individualizing instruction consists of four primary steps (Pretti-Frontczak & Bricker, 2004):

- **Get to know each child's interests, needs, and abilities**
- **Create opportunities for learning** that build on children's interests

Mary B. Boat, Ph.D., is Associate Professor and Program Coordinator, Early Childhood Education, University of Cincinnati, Ohio. She has worked directly and conducted research with young children with, or at risk for, disabilities.

Laurie A. Dinnebeil, Ph.D., is the Judith Daso Herb Chair in Inclusive Early Childhood Education at the University of Cincinnati. She is a former preschool special education teacher and has worked extensively in the fields of early intervention and early childhood special education.

Youlmi Bae, M.Ed., is a doctoral student and research assistant in Early Childhood Special Education at the University of Toledo, Ohio. She was an early childhood teacher in Korea and has worked with preschool Korean American children in a Korean Academy in Toledo.
• **Scaffold children’s learning** through supportive interactions
• **Monitor children’s progress** toward achieving important goals

These components are interrelated and form the framework for decision making around individualization.

To successfully create engaging learning opportunities for children, teachers must know
• what children enjoy and value,
• what children are capable of doing, and
• what adults can and should expect from each child (skills as well as appropriate content standards)

Teachers who know about the children can then create learning opportunities based on that information and support their learning through instructional strategies that promote growth.

Skilled teachers determine whether children are making appropriate progress toward achieving goals by monitoring progress (assessment) and using that information to change instructional strategies and intensity as appropriate.

**Get to Know Each Child**

Most children are naturally curious about their surroundings and eagerly participate in learning activities. For some children, however, it is difficult to identify what motivates them to be more fully engaged. Teachers who pay attention to what children do and say can usually find out what motivates them. This is true for all children, but even more so for children with disabilities because they may not exhibit the same kinds of behaviors as their typically developing peers.

Teachers who successfully work with children who have special needs are diligent in identifying child interests by collaborating with families and other service providers who know the child. This knowledge, coupled with teaching skills, is essential to determine how to use individual information about children to work toward desired outcomes for them.

For example, identifying familiar, common objects is a skill mastered by most preschool children and is a goal on many individualized education plans (IEPs). Some young children, however, have little interest in typical objects in early childhood classrooms. This does not mean that these children are not interested in objects, but rather that their interests fall outside the spectrum of items that appeal to most young children.

Teachers certainly want to encourage young children to be able to identify and name common objects. This skill is necessary for language and literacy development, and provides a common frame of reference for interactions with peers. Teachers who know children well can identify what is likely to motivate them to develop an interest in everyday early childhood learning materials.

**Create Opportunities for Learning**

The ability to generate and sustain children’s interest in learning is a
Maya, a 4-year-old, was diagnosed with a language delay. Maya’s teacher, Mr. Flores, is working with her on using words for common objects and activities in the classroom rather than gestures such as pointing or grabbing objects. Mr. Flores seeks a way to motivate Maya’s use of vocabulary. He carefully observes what interests Maya and uses this information to set up learning opportunities.

Mr. Flores notes that Maya enjoys working in the art center and especially painting and cutting paper. To provide her with an opportunity to practice using words for common objects, he places crayons and scissors just out her reach, creating a situation in which Maya must ask for the items. He does not hand the objects to her until she names or attempts to name them.

Mr. Flores may further support Maya’s learning by modeling the correct words and asking Maya to repeat them. She is then rewarded by receiving the objects she desires.

This scenario may be repeated, but should be utilized only to help Maya use her vocabulary to obtain what she desires or get her needs met. Mr. Flores actively reinforces Maya’s independent attempts to use her vocabulary, because independence is the ultimate goal.

The strategy described here works well for Maya, but effective teachers know that it will not work for every child. Thus, it is imperative that teachers know individual children’s interests, cultures, and values before determining the best way to create learning opportunities (Copple & Bredekamp, 2009). For example, a Native American child whose family culture teaches that it is not polite to ask for objects may not respond to the strategy that worked for Maya.

Early childhood teachers use a variety of strategies to facilitate learning opportunities for children. The seven techniques in Table 1 vary in level of teacher direction as well as in the degree to which a child must respond (Ostrosky & Kaiser, 1991). The first several strategies do not require a child’s response for an activity to continue. The later strategies are much more directive.

When creating opportunities for learning, make sure that children are ultimately in control of the situation. Even though the intent is to entice a child into the interaction, the child may or may not respond. Teachers try

Table 1: Teaching Strategies That Pique Children’s Interest

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1. <strong>Comment</strong> about an event that appears to interest the child. This technique prompts the child to repeat, respond to, or expand on the comment. A teacher looking at a child’s painting might say, “Look at all of the bright colors you used! I see pink, green, and purple.”</td>
<td></td>
</tr>
<tr>
<td>2. <strong>Expand</strong> on a child’s statement. Elaborate with one or two key words that are likely to build the child’s expressive vocabulary. A child may say, “I have truck,” and the teacher may elaborate by saying, “Yes, you have a red fire truck.”</td>
<td></td>
</tr>
<tr>
<td>3. <strong>Introduce an unexpected event</strong>. Set up situations that capture a child’s attention through novelty and create cognitive dissonance. A teacher might do something that is inconsistent with the daily routine or the way children typically perceive their environment. For example, hold a child’s name card upside down or start to dress a doll by putting a shoe on its hand.</td>
<td></td>
</tr>
<tr>
<td>4. ** Initially provide inadequate portions or insufficient materials.** Without sufficient quantity to complete a task, the child is likely to ask for more. If only a small ball of modeling compound is available, the child may ask for more to roll out and use a cookie cutter to make shapes.</td>
<td></td>
</tr>
<tr>
<td>5. <strong>Block access.</strong> When a teacher subtly denies a child access to a preferred object or event, the child is likely to request the object or ask for assistance. The teacher might set out bright balls in a plastic container with a tight lid. A child who is interested in playing with the balls will request help to open the container.</td>
<td></td>
</tr>
<tr>
<td>6. <strong>Create opportunities to choose.</strong> When children are given choices among objects, events, or activities, they are more likely to actively participate. Choices provide children with opportunities to develop expressive language and cognitive skills. Some choices may be routine, such as offering either crackers or cereal at snack time. Other choices capitalize on children’s interests by building on their activities: “Would you like the letter you wrote to go in the mailbox? Or do you want to take it home with you?”</td>
<td></td>
</tr>
<tr>
<td>7. <strong>Make a direct request</strong> to say or do something that requires more than a yes or no answer. For example, insist that a child state the name of an object before it is available for play: “Please say ‘ball’ if you want the orange ball.”</td>
<td></td>
</tr>

Critical skill for effective early childhood teachers. Teachers who can pique children’s curiosity and then use appropriate instructional strategies to convey information and skills provide children with rich learning environments (Sandall & Schwartz, 2008).
to create opportunities that interest and engage children in learning, but there is no way to make them be interested.

All of the strategies mentioned here are effective ways to engage all children, not just those who have disabilities. Instructional strategies are intended to provide the minimal assistance necessary for the child to successfully attempt the skill (Wolery, 2005; Wolery, Ault, & Doyle, 1992). When using these strategies, do not single out children or foster their dependence. Drawing attention to differences in how children are supported may decrease the likelihood the target children will participate in the opportunity. When planning an intervention, always ask if the strategy is appropriate for the individual child, necessary, and sufficient to promote success.

Scaffold to Support Learning

When teachers support learning, the key is to determine what type and intensity of support will be most helpful to individual children. A teacher’s simple glance may draw one child’s attention to an inappropriate behavior. Another child may need a verbal reminder. Yet another may benefit from specific guidelines or examples of positive behavior. One child may follow when the teacher demonstrates how to properly hold scissors to cut paper, while another may need hand-over-hand support for the same activity.

In all likelihood, children only need support temporarily, so savvy teachers know that fading their support is critical to children’s independence. Effective teachers know how to individualize support to be just the right amount of help. What criteria facilitate this decision-making? Beyond knowing children’s individual interests and preferences, there are indicators that may help teachers think about individual situations. Table 2 provides examples of how support from teachers or families may be matched to children’s needs.

**Scaffolding Strategies**

Response-prompting strategies (Wolery, 2005; Wolery, et al., 1992) is a phrase used to describe the process of providing help (or prompts) in order for the learner to make a desired response. Levels of prompting can be ordered from most-to-least or least-to-most.

- A most-to-least strategy can be implemented if the child is
learning a complex motor skill such as dressing. At first, adults provide children with a great deal of help and gradually reduce the amount of assistance as the child acquires the skill.

- **Least-to-most prompting** can be used when the child knows how to do something, but must be supported to use the skill. For example, children often need help to generalize the skill of turn taking to new situations. While they might be proficient at taking turns when playing Peek-a-Boo with an adult, they might not be comfortable taking turns when they play with a stacking toy. The teacher provides the least amount of help necessary for the child to successfully take turns, providing more help as needed in order for the child to be successful.

The amount of help provided is planned and structured to match the child’s skill level and desired outcome.

*Peer-mediated strategies* are another type of technique that can be used to support individual child learning (DiSalvo & Oswald, 2002; Kohler & Strain, 1999; Robertson, Green, Alpers, Schloss, & Kohler, 2003). These strategies are implemented when a more accomplished peer is paired with one who needs to develop or hone skills.

Peer mediation often occurs naturally in preschool settings. Children typically observe and interact with others in ways that scaffold development. An important aspect of designing curriculum and the learning environment is to make sure that young children have ample opportunities to interact with and learn from one another.
document observations that can fit into a busy classroom schedule.

## Make Sound Decisions Based on Data

The information that teachers collect as they observe and document children’s learning is critically important to inform curricular decisions. Understanding when to introduce new content or increase support for a difficult skill depends on using the information collected as part of the observation process. Teachers must analyze and use the data they gather to determine if their teaching strategies are effective and make changes when the data suggests that they are not (Luze & Peterson, 2004).

### The Role of IEPs

Individualization is the foundation of IEP development. IEP annual goals and objectives or benchmarks are target skills for the child to reach. While the annual goals provide a framework for a minimum level of accountability for individual children, they do not reflect the total of what children with disabilities learn in a given year, nor are they the curriculum.

IEP annual goals provide outcomes and direction that help young children access the general curriculum and developmentally typical environments. Although IEPs may include information that supports identifying appropriate instructional strategies, often it is up to the classroom teacher to determine the best way to help a child achieve his or her goals.

** Appropriately individualized instruction leads to meaningful learning.**

Fortunately, all of the strategies discussed here can help teachers implement instructional strategies that support the diverse learning needs of all children in a classroom. Effective teachers understand that, although IEPs may specify annual goals, these goals will be achieved when the skills to be learned are embedded in the classroom routine with strategies that facilitate children’s development.

* * *

Individualizing instruction enables skilled teachers to provide meaningful learning experiences to all young children, including those with special needs (McWilliam, Wolery, & Odom, 2001). In order to provide effective instruction, teachers must

- be knowledgeable about the learners, including their abilities, interests, and needs
- create learning opportunities that are embedded in daily routines, activities, or experiences that capture children's interest and draw them into an instructional interaction

```Subjects & Predicates
Effectively individualizing instruction is a cycle that involves knowing individual children, implementing effective instructional strategies, and determining whether or not the choices made resulted in child learning.
```
implement a planned and structured approach for curriculum content
make thoughtful decisions about the right kind and amount of support for children to be successful
monitor the success of instruction to make sound decisions to support children’s learning and development

Teaching is a reflective and intentional process. When scaffolding children’s learning, teachers can choose from a variety of tools in their instructional toolbox!

President’s Message continued from page 2

The Southern Early Childhood Association could and should be The Voice for the children and families of the South during the 2010 decade. SECA members are caring and knowledgeable. We are hard working. By collaborating and working together, SECA members can make a difference in the lives of Southern children and early childhood professionals. We can build and maintain quality programs. We can develop and provide good-quality professional development for early childhood professionals. SECA members can be the leaders the South needs.

Thank you for this opportunity to serve. I look forward to working for SECA, its members, and for children and families in the South. I look forward to working with you, the SECA members, to see all the things SECA can achieve.
Put These Ideas Into Practice!

Individualizing Instruction in Preschool Classrooms

Mary B. Boat, Laurie A. Dinnebeil, and Youlmi Bae

Children in early childhood classrooms have diverse learning needs. In order to support children with diverse learning needs, follow these four steps:

1. Get to Know Each Child
   ✮ Consistently observe individual children
   ✮ Identify what an individual child does that leads to success
   ✮ Notice when and where a child persists in trying to achieve a goal
   ✮ Note when the child has difficulty achieving a goal and why
   ✮ Collaborate with families and specialists to better understand and support each child

2. Create Opportunities for Learning
   ✮ Build on situations that interest the child and in which the child is successful
   ✮ Capture the child’s attention with appealing items, textures, or changes in voice
   ✮ Show interest in what the child is doing

3. Scaffold Learning
   ✮ Support a child’s learning opportunities with strategies such as verbal reminders or modeling a skill
   ✮ Encourage each child’s independence
   ✮ Use the learning environment effectively
   ✮ Include peers in the classroom and families in this process

4. Monitor Children’s Progress
   ✮ Give a strategy enough time to work
   ✮ Consistently implement a strategy or changes
   ✮ Consistently observe for skill or behavior change
   ✮ Observe frequently enough to get the information needed
   ✮ Keep track of the skills or behaviors to be monitored
   ✮ Find time to write down and review observations
   ✮ Use the information gathered to make changes in curriculum and/or teaching strategies
